

Graph view

Warehouse measurement

SynNetQoS warehouse records

Context co-occurrence

operating-context values

External reference

Vienna, Campus QoS, UCC, ns-3

Graph construction

Measurement-session graph

record nodes
session/context edges
within-session transitions

Context-pair edge graph

row count
degradation rate
support and lift

Source-metric-context graph

source coverage
metric coverage
comparison context

Output role

Structure analysis

transition summaries
transition-graph model comparison

Graph-mining evidence

high-lift context pairs
degradation signatures

Reference-only evidence

excluded from prediction
no common target merge
